

Comprehensive Diagnostic Liver Ultrasound Imaging

The decision to work with Philips is something we take very seriously. Our goal is to provide the education you need to make the most out of your investment.

Philips Ultrasound University

General Imaging 320

Comprehensive Diagnostic Liver Ultrasound Imaging is a one-day, sonographer-led course that is designed for sonographers and physicians to provide a comprehensive review of the role of ultrasound in liver disease including vascular disease. Topics will include ultrasound technologies of liver elastography, the use of contrast enhanced ultrasound in the liver, as well as the role of ultrasound in Li-Rads.

This course will be presented by M. Robert “Bob” DeJong, RDMS, RDCS, RVT, FSDMS, FAIUM who recently retired from The Johns Hopkins Hospital after over 28 years of service with 26 years as the manager of the Radiology Ultrasound Division. He currently has his own ultrasound educational company, Bob DeJong, LLC, providing ultrasound education. Bob is well known for his various lectures at national and local meetings.

Comprehensive Diagnostic Liver Ultrasound Imaging (GI320)

"Ultrasound of the liver has advanced to more than just gray scale and color Doppler. With the FDA approval of elastography and ultrasound contrast for the liver, ultrasound now has the ability to help monitor patients with fibrotic liver disease and add additional information on liver masses. With the newly developed liver Li-RADS system, it is important for the sonographer to understand the role of ultrasound in Li-RADS."

M. Robert "Bob" DeJong, RDMS, RDCS, RVT, FSDMS, FAIUM.

Objectives

Upon completion of this course, the learner should be able to:

- Discuss the proper technique, sonographic application and interpretation of liver exams
- Recognize and distinguish between benign and malignant pathology
- Discuss Couinaud segmental anatomy
- Discuss liver elastography techniques
- Discuss the steps needed to perform a liver contrast ultrasound

Faculty

M. Robert "Bob" DeJong, RDMS, RDCS, RVT, FSDMS, FAIUM.
Philips Ultrasound Clinical Service Specialists

Prerequisites

A thorough knowledge and understanding of 2D ultrasound imaging fundamentals and system instrumentation is required for this program.

Audience Statement

This course is for physicians and sonographers interested in expanding their knowledge of liver ultrasound assessment and interpretation.

Remote Access Available

This course has remote access opportunities available. Please speak to your Clinical Specialist for more information.
