

PHILIPS

Clinical Education

Philips Ultrasound Breast Optimization

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (vILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

Philips ultrasound general imaging 107VILT

About virtual instructor-led training

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60-120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

Philips Ultrasound Breast Optimization (GI107VILT)

Course description

This one-hour course is designed to equip learners with the knowledge to obtain optimal 2D and Color images on every breast patient to aid in the diagnosis, treatment and management of disease.

Philips ultrasound systems utilize the latest advancements in technologies which provides extraordinary levels of clinical imaging performance in virtually all patients for improved and accurate diagnosis.

Course objectives

Upon completion of this course, the learner should be able to:

- Learn advanced image optimization skills specific to breast imaging
- Discover how advanced image optimization skills will improve patient flow in everyday practice
- Associate benefits of great image quality with diagnostic confidence and workflow
- Discuss use of iOPTIMIZE Image Optimization features in 2D and Color

Prerequisite

A thorough knowledge and understanding of 2D ultrasound imaging fundamentals and system instrumentation is required for this program.

Audience statement

This course is intended for sonographers, mammographers who scan ultrasound and physicians who require additional knowledge of 2D and Color controls and optimization as it applies to breast imaging. This course is ideal for those seeking to refresh existing knowledge, as well as to train newly hired staff.
